

INDUSTRY 4.0 FEEDAPP

FEEDAPP, developed by Menci & C. Spa, is the result of a continuous research project started in 2018 that allows to monitor the product in every phase of transport and storage.

FEEDAPP meets the requirements of **INDUSTRY 4.0** and its study has enabled us, from the outset, to respond to the needs of a constantly evolving market.

The machine is equipped with an intuitive, **easy-to-use 7" color display PLC**, which allows the operator to control the status of the machine, monitor parameters and working conditions.

Particular attention was paid to the tele-maintenance and remote diagnosis device and to the simplified system for remote loading of instructions and work orders.

DATA RECORDING - BASIC PACKAGE -

Low/non low railing position, dosing opening level, assistance programmed

Axle load (semi-trailer Menci), working hours coclee, speed of screw rotation, hydraulic circuit pressure

Location branding: on site/ off site

Location via GPS, time, active order, alarms and warnings
